

**Amendments to the Claims:**

The following listing of claims will replace all prior versions, and listings, of claims in the application:

Please cancel claims 1-16.

17. (New) A discrimination medium for determining authenticity of an object by providing an optically discriminating mark on the object, the medium comprising:

a multilayer thin film having light selectivity of reflecting characteristics depending on a viewing angle, and

a support body where the multilayer thin film fixed or a masking sheet fixed to a surface of the multilayer thin film for masking a part of the surface.

18. (New) The discrimination medium according to claim 17, wherein a portion is formed by printing or foil transfer, and the portion exhibits a color equivalent to the color of the medium which further comprises the multilayer thin film viewed from a specific direction.

19. (New) The discrimination medium according to claim 17, wherein the multilayer thin film is cut into strips or fibers, the multilayer thin film is held between the support body divided into two layers, and one or two layers of the support body have an opening to allow the multilayer thin film to be seen.

20. (New) The discrimination medium according to claim 17, wherein the multilayer thin film is cut into strips, fibers, or small chips, the support body is made of paper, and

the multilayer thin film is mixed to the support body when the support body was made.

21. (New) The discrimination medium according to claim 17, wherein  
the multilayer thin film is cut into strips, small chips, or specific patterns, and  
the multilayer thin film is transcribed on a surface of the support body.
22. (New) The discriminating medium according to claim 17, wherein  
a hologram processing or a press processing is made to the multilayer thin film.
23. (New) The discrimination medium for discriminating according to claim 17, wherein  
the discrimination medium has an adhesive layer to adhere the medium to the object, and  
the adhesive layer includes a pigment or dye having a color which may be black.
24. (New) The discrimination medium according to claim 17,  
the surface of the discrimination medium facing the object is printed which may be  
black.
25. (New) The discrimination medium according to claim 23, wherein  
a fluorescent material layer or a light accumulating material layer is held between a  
part of the discrimination medium and a part of the adhesive layer or between a part of the  
discrimination medium and a part of the printed layer.
26. (New) The discrimination medium according to claim 17, the medium further  
comprises:  
a slit partially formed in the discrimination medium.

27. (New) The discrimination medium according to claim 17, the medium further comprises:
- a first multilayer thin film,
  - a second multilayer thin film, and
  - an optical absorption layer held between the first multilayer thin film and the second multilayer thin film.
28. (New) The discrimination medium according to claim 27, wherein
- both sides of the optical absorption layer have light selectivity of reflecting characteristics depending on a viewing angle.
29. (New) The discrimination medium according to claim 22, wherein
- the multilayer thin film includes a stamped layer for forming at least one of a hologram and an embossment.
30. (New) The discrimination medium according to claim 29, wherein the stamped layer is made from a material selected from thermosetting resins, ionization radiation hardening resin, and ultraviolet ray hardening resin.
31. (New) The medium for discriminating according to claim 17, wherein the multilayer thin film is obtained by stacking thin films multiple and drawing the stacked films.
